

GEL POLISH COLOUR COAT

WHAT IT IS

A colour coat designed specifically for use with the Gellifique® Gel System.

WHAT IT DOES

- Provides 14+ days of high-performance wear.
- Has a bold, full coverage finish.
- Durable and long lasting with correct application.

WHY YOU NEED IT

- Vegan formula.
- Formulated For Professional Use Only.
- Over 100 shade options.

DIRECTIONS FOR USE

- Complete full nail preparation.
- After applying and curing Base Coat/ Base Builder of choice, apply a thin and even coat of colour.
- Cure for 30 seconds in our lamp.
- Apply second layer and cure for 60 seconds.
- On darker shades remove the inhibition layer with a lint free wipe and IP solution.
- Follow with any of our Top Coats and cure for 60 seconds. On darker shades cure for an additional 30 seconds.
- Allow the Top Coat to "cool down" after polymerisation before cleansing / applying treatment.
- Refine the free edge with 180 grit file for a crisp shape.
- You do not need to cap the free edge.

TROUBLESHOOTING GUIDE

Reds: Highly pigmented red gels may cause slight pigment transfer during top coat application. This is a normal characteristic of intense red pigments. To prevent transfer, wipe the inhibition (sticky) layer with isopropyl alcohol before applying the top coat.

Neons: Some neon shades, particularly pinks, may temporarily darken after curing. This occurs as fluorescent pigments absorb UV/LED light during polymerisation. The colour typically returns to normal within 24–48 hours as the curing process completes.

Yellow, Brown & Dark Green: These shades contain dense pigments that can absorb or block UV/LED light, affecting cure efficiency. For best results, apply in thin layers and extend curing time as needed to ensure full polymerisation and a flawless finish.

AVAILABLE SIZES

- Professional: 0.5 fl. oz. / 15 ml
